WORK EXPERIENCE

Experience

- Developed **responsive, mobile-friendly, and scalable** web applications using modern frameworks and technologies including **JavaScript, TypeScript, React.js, Next.js, and Angular**.
- Specialized in **React development** with deep expertise in **functional components, Hooks, and component-based architecture**.
- Experienced with state management tools such as **Redux, Redux Toolkit, and Context API**.
- Proficient in **HTML5, CSS3**, and responsive design principles, implementing UI using **media queries, styled-components, Ant Design, Tailwind CSS, and Bootstrap**.
- Skilled in **React Router** for routing, and making API requests using **Axios or Fetch**, with a solid understanding of **RESTful APIs, asynchronous programming** and **WebSocket communication**.
- Worked closely with **back-end developers** to integrate APIs and third-party services, ensuring seamless data flow and functionality.
- Collaborated with **UI/UX designers** to enhance application usability and deliver intuitive, user-centric interfaces.
- Actively participated in **Agile development**, including **sprint planning**, daily stand-ups, and collaborative team discussions.
- Conducted **code reviews** to maintain high standards of code quality, consistency, and performance.
- Performed **unit testing** using **React Testing Library** and **Jest** to ensure **robust, maintainable code** and minimize production issues.
- Implemented **lazy loading, code splitting**, and other performance optimization techniques using module bundlers like **Webpack** to improve load times and efficiency in large-scale web applications.
- Used **GIT** for version control, working with **feature branches, rebasing, and merging** in a collaborative team environment.
- Ensured **cross-browser compatibility** and followed **accessibility (WCAG) standards**, resulting in inclusive and user-friendly experiences across diverse devices and platforms.

Software Engineer

Brigosha Technologies

07/2022 – 07/2025

Bangalore

PROJECTS

1. Locomotive Simulation

Developed a real-time simulation platform to monitor train movement, speed, and location for driver training purposes.

2. Elastotec LaggingSelect

Developed a web portal that allows clients to create and manage projects, conveyors, and pulleys for machine tracking.

3. New PMT

Built an online portal to manage associate, department, team, and project profiles, along with tracking attendance, leaves, and overall organizational activities.

4. Hiring Management (HM)

Developed a recruitment gateway platform enabling businesses to manage the entire hiring process, including screening, interview scheduling, and shortlisting.
